

MUMMADI NAVEEN

Java Backend Developer • Spring Boot • Microservices • AWS & Kubernetes

naveenj15@gmail.com | +91 7893319892 | Bengaluru, India

PROFESSIONAL SUMMARY

Results-driven Java Backend Developer with 3+ years of experience engineering scalable microservices, high-availability REST APIs, and cloud-native systems for an enterprise automobile dealership platform serving hundreds of dealerships. Delivered production-critical backend solutions across the full SDLC — from API development to CI/CD automation, Kubernetes orchestration, and P1/P2 incident resolution. Expert in Java, Spring Boot, AWS, Docker, Kubernetes, MySQL, MongoDB, and Elasticsearch — consistently reducing deployment friction, improving system reliability, and driving operational efficiency through engineering best practices.

TECHNICAL SKILLS

Languages: Java, Perl, SQL, JavaScript

Backend & Architecture: Spring Boot, Microservices, RESTful APIs, OOP, Design Patterns, Data Structures & Algorithms

AWS Services: EC2, ECS, CloudFormation, SQS, SNS, Route 53, API Gateway, Load Balancers

DevOps & CI/CD: Jenkins, Groovy, Docker, Kubernetes, Rancher, CI/CD Pipelines

Databases & Search: MySQL, MongoDB, Elasticsearch

Monitoring & Tools: Graylog, Kibana, New Relic, Icinga | Git, JIRA, Swagger, Postman, IntelliJ, Confluence, GitHub Copilot

Practices: Agile/Scrum, SDLC, Production Support, NOC Operations, Incident Management

WORK EXPERIENCE

Software Engineer II | DealerSocket India Pvt Ltd

Sep 2022 – Present

Inventory+ — Enterprise Dealer Management System (DMS) | Automobile Industry

- Architected and delivered scalable Java/Spring Boot microservices for Inventory+, a mission-critical DMS platform used by automobile dealerships nationwide to manage vehicle inventory, pricing, auctions, and market analytics.
- Engineered RESTful APIs and backend workflows in Java and Perl, powering core inventory operations — vehicle acquisition, pricing optimization, inventory aging, auction handling, and portal publishing — directly enabling dealership revenue decisions.
- Built the IIM (Ideal Inventory Model) module leveraging market-trend analytics and supply-demand intelligence to generate intelligent buy/sell recommendations, improving dealer profitability and inventory turn rates.
- Developed pricing intelligence modules (TrueTarget, TrueScore), enabling dealerships to benchmark vehicle pricing against live market data and optimize margins with data-driven precision.
- Engineered and optimized CI/CD pipelines using Jenkins and Groovy, eliminating manual release steps and increasing release velocity and consistency across all environments.
- Containerized 10+ microservices with Docker and orchestrated production deployments on Kubernetes and Rancher, achieving high-availability delivery and simplified multi-environment scaling.
- Spearheaded migration of legacy and microservices-based applications from AWS to on-premise infrastructure via Rancher, reducing cloud infrastructure costs and improving operational control.
- Integrated AWS services (EC2, ECS, CloudFormation, SQS, SNS, Route 53, API Gateway, Load Balancers) for distributed system integration, deployment automation, and fault-tolerant architecture.
- Optimized MySQL, MongoDB, and Elasticsearch queries supporting high-throughput transactional workflows and real-time inventory search at scale across the dealership network.
- Resolved P1/P2 production incidents as part of NOC operations using Graylog and Kibana for root cause analysis — minimizing MTTR and maintaining SLA compliance for business-critical systems.
- Monitored application and infrastructure health using New Relic and Icinga, proactively identifying performance bottlenecks and preventing unplanned downtime across production environments.
- Accelerated development throughput using AI-assisted tools (GitHub Copilot, Claude, ChatGPT) for code generation, debugging, and automation — increasing team delivery speed.
- Collaborated in Agile/Scrum sprints with cross-functional engineering, QA, DevOps, and product teams across end-to-end SDLC — from requirements through production stabilization.

EDUCATION

Master of Computer Applications (MCA) | Yogi Vemana University, Kadapa

Completed

CORE STRENGTHS

- | | | |
|------------------------------|------------------------------|------------------------------|
| ❖ Backend System Development | ❖ Scalable REST API Design | ❖ Microservices Engineering |
| ❖ Production Support & NOC | ❖ CI/CD & Release Automation | ❖ Cloud & AWS Infrastructure |
| ❖ Monitoring & Observability | ❖ Analytical Problem Solving | ❖ Agile Collaboration |
